

CMPSCI 377: Operating Systems

Discussion 4

Sean Barker
sbarker@cs.umass.edu

Discussion tweaks and clarifications

- Discussions will cover **previous week**
 - Will not cover the lecture from the previous day
 - Starting today (will not cover synchronization/locks from yesterday's class)
- Discussion questions/quiz grading
 - Goal is to review and reinforce material, not test you
 - As long as you turn something in and demonstrate a reasonable understanding, you'll get full credit
- Moodle pages for lab 1 and homework 1 today
 - Will send out link ASAP

Lab Notes/Errata

- `'warning: implicit declaration of function 'waitpid''?`
 - Add `"#include <sys/wait.h>"` to the top of your file
- Remember to only input single digit counts and timeouts (0 to 9)
 - Only the first digit is read (so `10=1`, `25=2`, etc.)
- Remember that `closh` uses regular GCC, `Nachos` uses MIPS GCC
 - Comment/uncomment `ARCHDIR` (then open new shell) to switch between GCCs
